

flight

designed for flexible applications & layouts

Flight is a highly functional, elegantly designed and well engineered, flip top table. It is particularly suitable for mixed use and multipurpose facilities and where training and meeting furniture is required, but space may be at a premium.

The simple and precise design of Flight allows quick and easy storage, of either single or multiple tables. It has the added benefit of mobility due to its lightweight frame and easy glide, locking castor system.

The unique push release mechanism on the pivot arm allows the arm and leg to be moved from the nesting position into the support position, before locking the table in the working position. The table top is available in a wide choice of MFC and veneer finishes

and a polyurethane edged 'mist grey' option. Flight is 100% recyclable with a patent pending.

Flight tables are beautifully engineered and supported on a central beam which allows the table top to be flipped over from a horizontal to a vertical position. It is an innovative table system designed for multi-use applications and layouts.

Flight is the ideal table solution for those high traffic areas used for a variety of reasons - impromptu meetings, seminars, training, conference or dining.

For safety reasons, the flip over movement is controlled through friction bearings. At the same time the legs are automatically moved from an 'in line' position to slightly angled so that tables can be horizontally 'nested' when not in

use. The table operation takes a matter of seconds and is operated through push buttons located in the top support brackets.

Flight tables are mounted on braked, large diameter double wheel castors for stability and mobility. The 'mist grey' option has a 'moulded on' resilient polyurethane edge and the MFC finish gives service and durability. Structural parts are finished in silver and polished aluminium.

The Flight table system can be fitted with either rectangular or 'D' end top shapes in a choice of sizes.
